

Make a front end user-friendly bank using Java GUI.

For right now you just need to make the GUI design and a few mouse clicks.

The Bank, BankAccount, Person, Date, Month, and Day implementation will be provided to you if you choose to use it. I'm still writing up documentation for it. You may use YOUR OWN implementation if you wish.

The following pages show what your GUI should look like/do. YOUR IMPLEMENTATION DOES NOT HAVE TO LOOK LIKE MINE.

The following only show a few GUI pages. Use your imagination for the rest.

(+) BANK OF AWESOME

We're glad you choose to Bank with us. Please fill out the following info.

First Name: []

Last Name: []

Date of Birth: [] [] []

Password: []

Confirm Password: []
